Functions

Two-way talk
Allows for seamless communication between the camera, client and recorder over coaxial cable, and offers instant voice intercom and timely audio alerts.

Face Recognition
Dahua Face Recognition technology extracts the features of captured faces and compares them with that in face database. *Face Recognition conflicts with SMD Plus and Perimeter Protection.

* *Dolynk cloud version: DMSS 2.3.0 and above, Dolynk Care 2.53.00 and above.*
· 4-channel two-way talk over coaxial cable allows for seamless communication between the camera, client and recorder.
· 4-channel AcuPick for analog channels which improves the efficiency of target retrieval.
· 4-channel perimeter protection for analog channels which supports tripwire and intrusion detection powered by AI.
· 2-channel face recognition for analog channels which supports face comparison.
· 4-channel SMD Plus for analog channels or 8-channel SMD by camera which allows the device to trigger accurate alarms for humans and vehicles.
· 4-channel AI Coding saves on storage and bandwidth while maintaining the details of targets in videos.
· Supports HDCVI, AHD, TVI, CVBS and IP video input.
· Supports up to 8-channel IP camera input and each channel can be up to 8 MP. The incoming bandwidth reaches 64 Mbps.
· Supports accessing Wi-Fi cameras, making it suitable for a wide range of scenes.
· Smart H.265+ and H.265 dual-stream video compression.

Perimeter Protection
Automatically filters out false alarms caused by animals, rustling leaves, bright lights, etc. Enables system to act secondary recognition for the targets. Improves alarm accuracy.

AcuPick
This industry-leading search technology effectively utilizes back-end intelligence to help with searching through massive video data to quickly and conveniently locate targets with greater precision.

SMD Plus
With intelligent algorithm, Dahua Smart Motion Detection technology can categorize the targets that trigger motion detection and filter the motion detection alarm triggered by non-concerned targets to realize effective and accurate alarm.

Enhanced Encoding
Encoding Enhancement mode optimizes videos through real-time encoding to make them smoother and improve scene rendering.
